

# FEAT Industriale

## We forge all you need

EN ISO 9001 certified

Worldwide ACE liability insurance

Product certifications available

- TÜV CERTIFICATE
- NIPPON KAIJI KYOKAI
- LLOYD'S REGISTER
- DET NORSKE VERITAS

The background of the advertisement features a collage of industrial scenes. On the left, there's a photograph of a large industrial building with a parking lot. In the center, a conveyor belt carries several glowing red-hot metal castings. On the right, a robotic arm is shown holding a large, glowing orange metal ring. At the bottom, a bright furnace is visible with molten metal being poured into a mold.

Feat Industriale – a division of the Feat Group SpA which manufactures steel components – is a worldwide leader in producing hot die forgings up to 150 kgs by means of high technology mechanical presses.

**FEAT**  
INDUSTRIALE

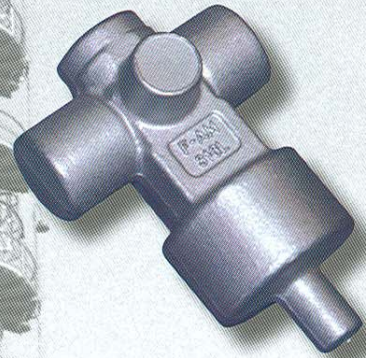

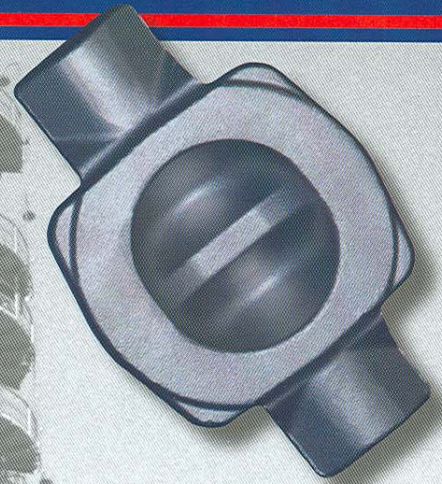

**FEAT**  
GROUP

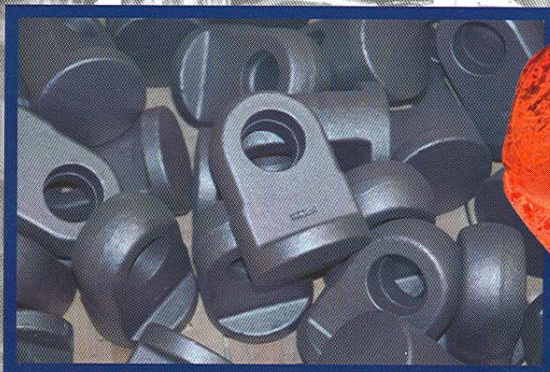

We mainly supply Petrochemical, Earth-Moving, Lifting and the mechanical industry in general.

Our valve components are present in nearly all types of plants in the world. From petrochemical, to pharmaceutical, to nuclear to name a few. All components can also be manufactured with the most prestigious steels: pure stainless steel, duplex or exotic materials.

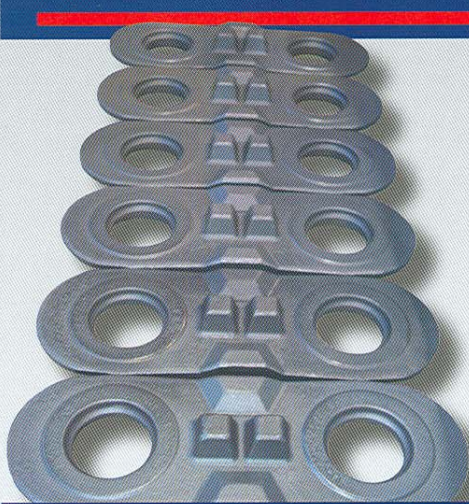

The most prestigious OEM's use the excavator components manufactured by Feat.

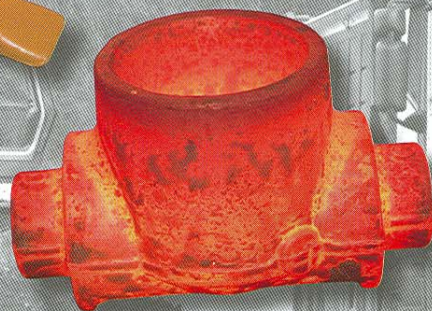

We use carbon, alloy and stainless steel, to produce 20,000 tons per annum.

It is possible to find the Feat Logo in all the main applications of heavy industry.

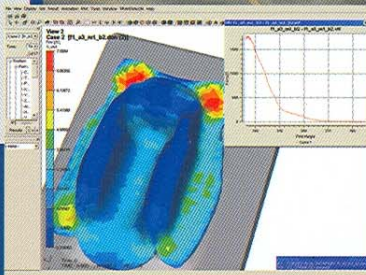

With continual investments every year, we aim to keep the highest production and quality levels.

Rapid prototyping machines and the Feat labs are at our customers disposal.

Our tooling department uses the most advanced "know how" which was developed with 40 years of experience.

**Feat Industriale** is specialized in manufacturing steel closed hot die forgings.

The factory is located close to Milan and it is equipped with a full range of mechanical presses – from 1000 tons up to 6300 tons – that allow the manufacture of a wide range of products, from the smallest to 150 kgs in weight.

Feat is able to supply items with complex geometry in flexible small batches or serial production.

Thanks to the co-operation with all other Divisions of Feat Group SpA we can supply either raw forged pieces or finished ones. Heat treated, sandblasted, coined, machined and so on.

All dies are designed by means of 3D CAD/CAM and the most sophisticated 3D forging simulation program in our In-house Die-shop, and they are then manufactured using "high speed" CNC machines.

Feat takes advantage of the best technology such as co-generation, fast die changing, in-line cutting material systems, robot-manipulators and the controlled cooling of pieces.

Feat is distinguished by its service; customers find in us the needed commercial, technical and quality assistance to develop the best pieces for the final product, for a real "supply chain" philosophy.

Feat guarantees complete "customer satisfaction" by applying stringent quality inspection during production and prior to final packaging.

Our fully equipped laboratory will guarantee chemical, mechanical and non-destructive tests.

Our certified quality system and our product certification impose codified processes and full traceability of our products.

We are considered worldwide as the "ultimate forging supplier".
